

# Deja Vu: Hammer the Database

## Descriere

### AcadNet 2020+1

Author: Alexandru Razvan Caciulescu

Welcome to the "Deja vu: Hammer the Database" challenge!

Once again a database in your multi-million lines of code legacy system is causing you problems. This time the source code has been completely lost, however you still have the binaries. This is a similar database to something that has been cracked *in the past* and for which we have a source code and solution, however we know about this one that it was implemented directly into *DRAM* hardware.

Your mission, should you choose to accept it, is to find a way to interact with the database such that just by manipulating the input we can log in without knowing the password.

Good luck *hammering* away at it!
